## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the selective one-way driver must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.
2. The drawings are objected to because in figure 3, reference character (41) is pointing to the bend end (42).

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Specification***

3. The disclosure is objected to because of the following informalities: on page 6, lines 8 and 13, "T-shaped cavity 27" should be changed to, -- T-shaped cavity 25--.

Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 1-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 1 recites "a selective one-way driver through which the hollow shaft drives the bit receiver in selective one of two directions", which lacks sufficient support in the specification as originally filed. On page 4, line 23, Applicant with reference to figure 2, describes for the selective one-way bit driving apparatus to include a one way driver through which the hollow shaft (20) drives the bit receiver (30) in selective one of two directions. Figure 2 does not show the driver, at best a protrusion is illustrated, which is not numbered and or described. As applicant is aware for a driver to selectively drive a tool receiving section, there must be cooperating elements, e.g., pawls (not shown) engaging gear teeth (34) and switch (not shown) to actuate the direction selected and to selectively engage the pawl. The specification as filed does not have support for any type of engagement selective or otherwise. The only other reference to the drive (24) is on page 5, line 21 that describes, "installing" the drive on the second section 22, adding to discrepancies, i.e., is the driver detachable?

Specification appears to describes means of assembling different parts together, i.e., how hollow shaft (20) is releasably attached to the bit receiving section (30), i.e., through connectors (40), groove (35), restrainer (50) and the lock (60), which locks the parts axially together, not rotatably, since hollow shaft (20) may freely rotate relative to (30) when connectors

Art Unit: 3723

are installed in the cavities (25) (27) and restrained and locked by (50) (60), i.e., (42) rotatable within the groove (35). There is no support for driving the bit receiving section selectively.

Applicant is required to point out the support for the claimed subject matter.

No new matter should be entered.
